

## GIS in Schools – Professional Learning

Earth Ed and Esri Australia are working together to bring three Professional Development opportunities to teachers across Victoria.

Each session will guide you through basic field work, data collection and analysis using free Geographic Information System (GIS) technology available to all schools through Esri Australia's GIS for Schools Program.

This workshop is targeted at secondary teachers of STEM, Environmental Science, Geography or Outdoor Education.

This program is fully funded for teachers and includes lunch and morning tea, however, places are strictly limited so participants are encouraged to register early.

Date and Time	Venue	Address
